ALUMA-GRIP 701 flashing may be used in some Barritech details

Please be advised that ALUMA-GRIP 701 foil-faced self-adhering flashing may be used as a direct substitute for 705 FR in BVP and BNP details. ALUMA-GRIP 701 comes in various widths and bonds to most common building materials. All surfaces are prepared with CCW-702LV, CCW-702 WB or CAV-GRIP contact adhesive. The ALUMA-GRIP 701 is applied over the contact adhesive with a 2" minimum lap onto neighboring pieces. The use of LiquiFiber or DCH Fabric continues to be an option when installing Barritech VP or Barritech NP as indicated in the BVP and BNP details.
